Data module/Technical publication	Title
None	

Description

1   General

This data module contains MathML in order to produce the following:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Since MathML is not supported as of S1000D Issue 5.0, this would normally fail to validate. However, the -x option allows specified XML namespaces to be ignored when validating.

To ignore MathML, for example:

```
$ s1kd-validate -x http://www.w3.org/1998/Math/MathML <data modules>
```
